Evidence of Learning

Get info about your class

Get info about a student

Get insights about your students.

EDPlan Insight is designed to support using your data to inform your instruction. You can easily add your PM Benchmarks and Numeracy Screener or even the Kindergarten Screener and then with a few clicks you can see the data in various ways to help you plan for effective instruction. The easiest way to use EdPlan Insight is to start off by clicking on the Assessment Data Entry. Here you can easily add (it saves as you go) data. Then, go to Reports to get snapshot overviews of your class. Here you will be able to see where you need to put your efforts and start planning for success. To go even further, click on Evidence of Learning. Here, you are able to drill down further into your data and find out more about the needs of the various communities and individual students in your class. It is simple to use, but, powerful in its application--and it is easily accessible through Office 365. Give it a try!
